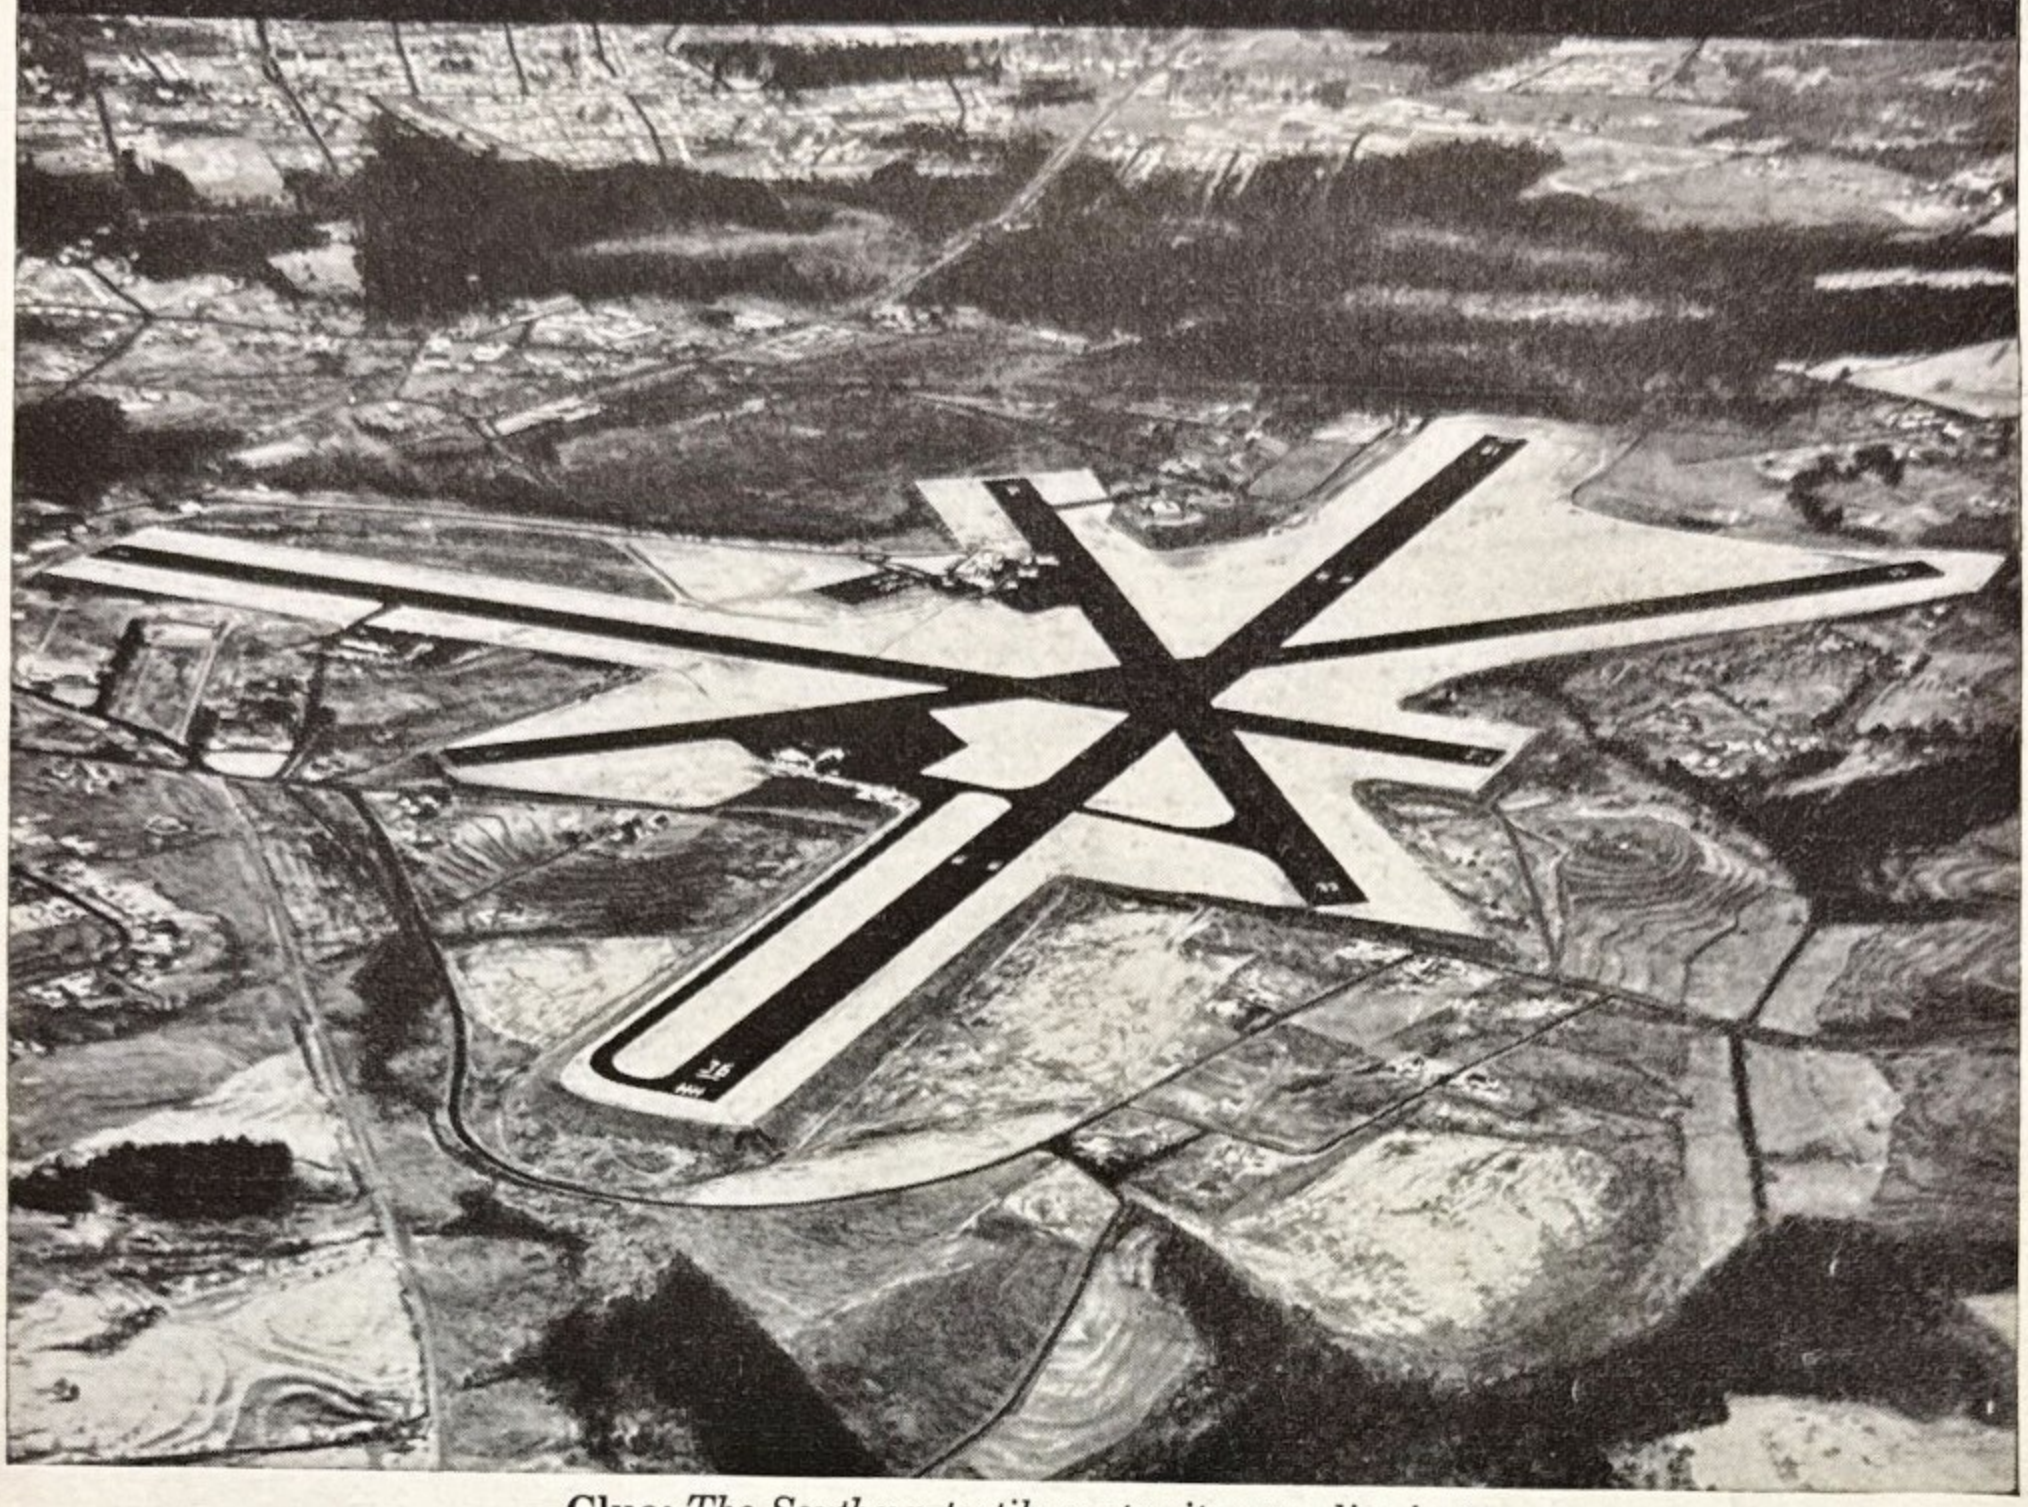
Test your cross-country memory

Can you name this airport?



Clue: *The Southern textile center it serves lies just east of the Blue Ridge Mountains.* (*Answer below.*)

Now test your aviation-oil memory: Can you give two important reasons why Gulf oils are better for your engine?

1. In addition to providing efficient, thorough lubrication, Gulf aviation oils help keep engines *clean*—and safe!

2. Gulf-clean engines can go longer between overhauls, because there's less wear and tear on engine parts.

Choose either new Gulfpride Aviation Oil Series D, the detergent oil, or Gulf Aircraft Engine Oil, the straight mineral oil—both keep your engine Gulf-clean and safe.

The airport is the Greenville, South Carolina Municipal Airport, a little over three miles east of the city. All runways are paved. The longest is 5,395 ft.

When you land here, we know you'll be pleased with the friendly Gulf service and the fine Gulf products available.
